

AI Care Insights

Turn Care Data into Better Decisions

Care Insights uses AI to analyze care notes and visit information, organize documentation into meaningful categories, and surface potentially significant events.

- AI-powered classification
- Severity indicators
- Identify potential risks
- Improve care outcomes

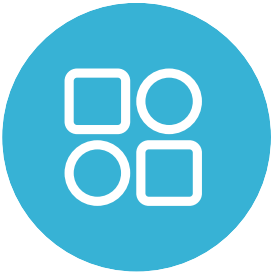

From Care Notes to Care Insights

Classify. Prioritize. Review. Understand.

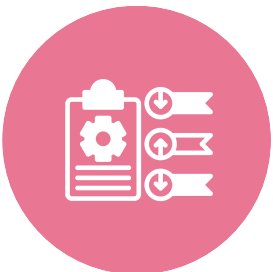

ANALYZE

AI analyzes care notes and visit information as new documentation becomes available. The dashboard brings clients, caregivers, visit dates, and associated care notes into one view for review.

CLASSIFY

Care notes are automatically organized into categories such as: Functional, Medical, Clinical. Additional sub-classifications may also appear, providing more context around documented concerns.

PRIORITIZE

Care Insights can display severity levels and distinguish between reviewed and not reviewed items, helping teams prioritize documentation for closer examination.

SPOT PATTERNS

Stats View provides visual charts and trend analysis based on the selected filters, helping teams look across documentation rather than reviewing each note in isolation.

REVIEW

Staff remains responsible for evaluating documentation and determining the appropriate next steps. AI classifications and severity indicators are supportive tools, not clinical determinations.

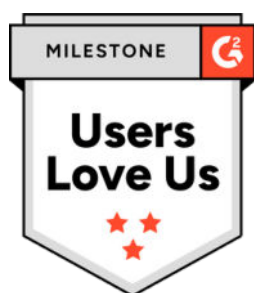

AI that brings care into focus

 AI Smart Scheduler

 AI-Assisted Notes

 AI Voice Bot

#1 Home care management software to transform the way you provide care.

WHY
CareSmartz360?

- APIs for secure integration
- Structured data migration support
- Microsoft-backed 360° data security
- World-class user interface
- Award-winning support; <2 min response time
